Occular Cavity Training

Occular cavity training shoot at **red target**. Real 3d shooting.

TRAINING WITH TARGET TILES

Reduce the Risk of getting hit by bullet shrapnel and improve your first shot accuracy with rubber Target Tiles.

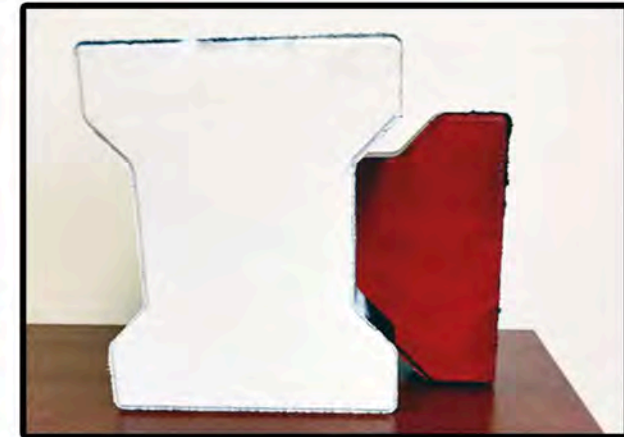

They are safe for close range pistol & shotgun practice. They work with pistol calibers from 22 to 357 hollow points, so they are good for beginners to experts.

These targets are made from 100% recycled tire crumb & are manufactured in the USA.

Use them individually, or for practical shooting like height, depth perception, order and tempo, by using different colored targets at different heights & distances.

Use them also for tactical practice like hostage situations, ocular cavity, trigger pull (left-right) & anticipation (up-down) improvement or as a basic knockdown target.

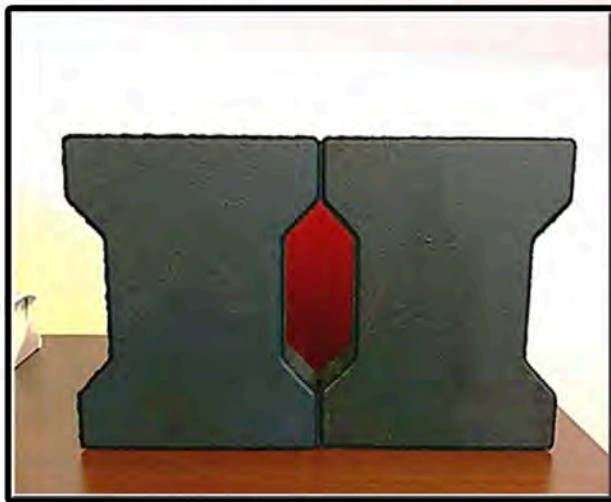

Hostage Training

3d target for practicing hostage situations. Shoot **back red target**.

Next generation will have flesh tones for realistic practicing in low light situations.

Trigger Training

Shoot through Up-down opening at **red target** for trigger training corrects right-left.

Basic Training

TARGET TILES™

We suggest that the rubber Targets be placed on wooden shelving at safe heights and distances for challenging shooting practice. Do not use metal

Wrist Training

Shoot through Left-right opening at **red target** for wrist training corrects up-down.
